

Why Kinective

Simplify access to technology to compete and better serve your communities.

Kinective is the most open and connected banking operations platform that integrates all the systems, software, and hardware directly to your core so you can deliver exceptional client experiences.

As the largest provider of connectivity for both digital and branch channels, Kinective is the force multiplier for helping you compete in today's modern world.

80+
fintech & hardware integrations

40+
core integrations

1 out of every 3
FIs partner with Kinective

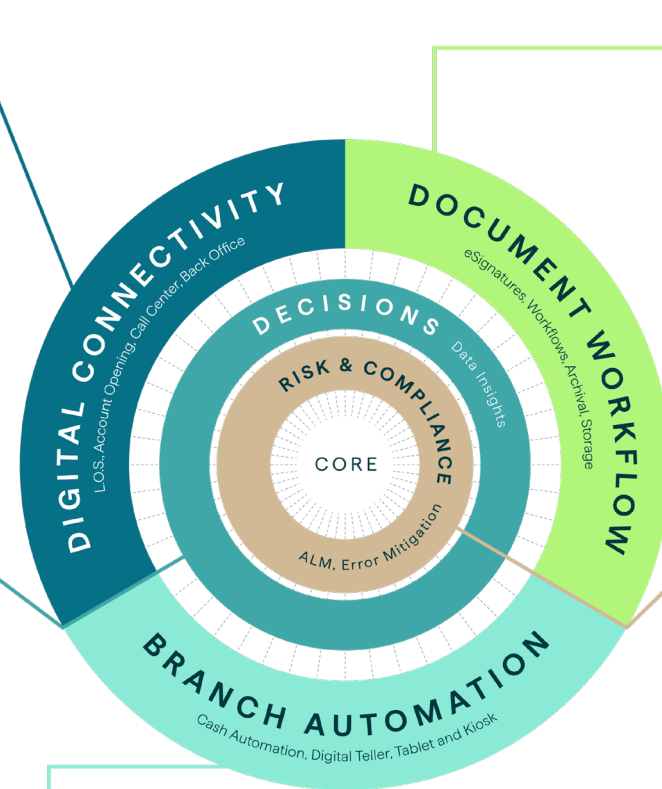

100%
focused on banking

To thrive in today's modern, digitally-focused world, bankers need integrated technology to scale transformation efforts quickly and securely. Access true choice and freedom with the largest library of turnkey, fintech solutions directly integrated to your core.

You invest millions of dollars in technology, people, and services each year, but do you know how those investments are performing? Drive actionable insights from transactional data across your entire technology fleet to make data-driven decisions on purchasing, deploying, and maintaining branch hardware.

Significantly automate internal business processes, digitize entire document workflows, close transactions faster, and transform the way documents flow across your institution with the only enterprise eSignature workflow platform made exclusively for financial institutions.

Measure and manage risk while maximizing profit with our enterprise-level interest rate risk management, reporting, and data conversion suite.

If your people are your most important asset, then why are they wasting time on repetitive manual tasks instead of enhancing client experiences? Connect the hardware you need to run a modern branch integrated directly with your core banking system to optimize efficiency, balancing, and staff performance.

New product names.
