Kinective Checks

System Requirements

Financial Institution To-Do List

- Determine types of checks

- Print image data file for each check (XML, tab delimited, comma delimited accepted or overlay)

- Sample completed check for each type of check

- Network connectivity to all check printers

- For Kinective Checks version 2.1.0 SP3 and later, universal drivers are supported. Financial institutions are responsible for testing.

- The print test utility can be used to determine printer compatibility prior to purchasing Kinective Checks.

- You must confirm that the check printers are compatible with your Kinective Checks server's operating system prior to your Kinective Checks commitment.

Server Requirements

Important Notices	- The server specifications presented here are to be used as general minimum requirements and may differ based on factors such as your financial institution's size and volume of transactions. - Specifications are subject to change without notice. - Please consult Kinective Support for your specific requirements.
System Types	Virtual via OVA download: VMware ESXi or Microsoft HyperV
System Resources	Servers are created as Virtual Servers at Kinective and downloaded as a fully installed (yet to be configured) server. Manual setup of these resources is not required.
Disk Space	- Drives need to be in some type of redundant storage (RAID array, SAN, etc.) to prevent downtime. - C (OS drive): At least 70GB of free space (after installing the OS and all Windows Updates). - E (Application drive): 60GB if you will manage (and increase as needed) drive space. 160GB if you will allocate space one time.
Hardware	- Intel Quad Core Xeon 3.0 GHz 8 Cores (or VCPUs for VMware) @ 2.6 GHz or better (minimum configuration)
RAM	16GB of RAM
Supported OS	Windows Server 2022 (Small Business Edition not supported)
Other	- Gigabit Network Interface - This server must be joined to the same domain as the client workstations. - The domain must have normal access to a fully functional Domain/Active Directory server.
