Whether you're trying to enable real-time transaction processing, convert to digital transaction receipts, or improve teller productivity, Kinective is the only company with the foundational integration technology to power transformation.

Why Kinective?

Consumers are seeking better banking experiences now more than ever before.

“

A key aspect of elevating customer experience (CX) in banking is reimagining the branch experience—leveraging technology to streamline interactions, enhance personalization, and seamlessly integrate digital and in-person services. By modernizing branches with innovative solutions, financial institutions can create more efficient, engaging, and customer-centric experiences that drive satisfaction and loyalty.

Benefits of Kinective's Branch Hardware Integration Solutions

Agnostic

We know the market, and we ensure your integration is built to support all makes and models of cash automation hardware, and provide support for enhanced features of the latest models.

The client can drive both new and older devices on one platform.

Functionality

Built based on operational best practices, graphic error handling for ease of problem resolution, and drivers are built for all hardware vendors. This means less hardware support calls.

Server based footprint, centralized administration, for ease of install and support.

Analytics

Clients receive firsthand information delivered by the only browser-based cash automation solution on the market.

Knowledge of uptime, availability, operational use, trends, and cash position allows clients to justify additional TCR spend.

“

Kinective is a great partner, and they deliver on what they commit to.

We know that keeping our Cash Recyclers operating smoothly is just as important to Kinective as it is to us.”

“

Tory McVay
SVP/Chief Retail Officer
OnPoint Community Credit Union

Hub & Link

Improve teller efficiency by reducing manual tasks and automating balancing through a real-time integration between cash handling hardware and core processing software.

Access

Named Fintech Product of the Year, Access lets associates securely and remotely process transactions to cash handling hardware from any workstation in the branch.

Insight

A business intelligence tool that provides visibility into how your cash automation fleet is being used and performing.

Vs

Existing solution

- Reliance on workstations
- Multiple servers needed
- Cash recyclers unavailable during a network outage
- Only adjacent users (teller role) can access TCRs
- No visibility to device performance, cash levels, or user proficiency
- Optimized for specific brands & models : may not support all models of TCR
- “Least common denominator” integration : does not support modern, advanced TCR features

Kinective

- Zero-workstation footprint architecture
- Single virtualized enterprise server
- Hub redundancy allows staff to use cash devices during a network outage
- Opportunity to securely share hardware with anyone in the branch (Access)
- Supports cross-trained staff
- Equipped with hardware analytics tools providing operational and cash data real-time
- Completely vendor-agnostic; buy any TCRs you want in the market
- Fully supports modern TCR features (self-audit, deplete, replenish, transit/transport cassettes)
