Auto-populate Free Entry Drop List Values from the FISpecific.xsl

Specifcation: If there is a Drop-list field that should be placed on every document and the values are expected to change frequently then define the values in FISpecificXSL.

Add JavaScript to auto-populate the drop-list. Change the values in FISpecificXSL in future and the updated values will appear on each document, if mapped and scripted as decribed below.

The Drop-list field is auto-populated using the field values (CSTM_DEPT_BRANCH_VALUES) defined in FISpecificXSL.
The Drop-list field is set as a mandatory field. This field will show when processed and hidden on the flatten copy.

Each time value is selected and saved, the Saved session will save the value and will show when session is retrieved.

What are the Design requirements?

1. Drop List - **IMM_UNL_DEPT_FIXED_LIST**
Drop List Property - "General" tab - "Hidden" checkbox is checked.
Drop List Property - "List" tab - "Control Type" set to "Drop-list, allow free entry"
This field is named as IMM_UNL so it will remain unlocked until archived.

2. Multi-line Entry Field - **CSTM_DEPT_BRANCH_VALUES**
Format Tab Properties - "Multi-line" checkbox selected. "Limit text to field size" checkbox selected.
This field can be placed off-the page based depending on the Financial Institution's business requirements.
Allow Free Entry List

This field is auto-populated using the FISpecificXSL.
Check-in the FISpecificXSL to auto-populate below field.
