Auto-Populate Document Fields Based off the Signer Name Selected from the Drop List

When should I use this Javascript?

Scenario 1:
The document has only 1 location for a signature field AND only 1 signer must be selected upon Processing the document. The selected signer's personal data will populate below the signature field.

Refer to Example 8a for Scenario 2.

Refer to Example 8a additional reference related to "**What is the expected flow of this document in eSign?**"

What happens when the same Signer is available with two IMM Party Prefixes in the XML data?

- Example: JN4_NAME and AS4_NAME is "John Smith"
- The smart drop-list field will only show each signer ones.

"John Smith" is only shown once.
