

Document Workflow Sign 2022

System Requirements

Server Requirements

Important Notices	 The server specifications presented here are to be used as general minimum requirements and may differ based on factors such as your financial institution's size and volume of transactions. Specifications are subject to change without notice. Please consult Kinective Support for your specific requirements.
Server Installation	 Installation is performed via OVA download. VMware ESXi or Microsoft Hyper-V is used for deployment. Manual configuration of hardware and software resources is not required for the Document Workflow Sign Server. Virtual servers are created at Kinective and downloaded by the financial institution. Once downloaded, the financial institution has a fully installed server that only requires user configuration before setup is complete.
System Upgrades	 Upgrade is performed via "Easy Install" Document Workflow Sign setup. Manual configuration of server hardware and software resources is required before running the Document Workflow Sign setup. Refer to the server specifications presented here for prerequisites and minimum requirements.
General Hardware	Intel Quad Core Xeon (recommended) or comparable
	Drives need to be in some type of redundant storage (RAID array, SAN, etc.) to prevent downtime.
Disk Space	 C (OS drive): At least 70GB of free space after installing the operating system (OS) and all Windows updates.
	• E (Application drive): 60GB if you will manage drive space (and increase as needed). 160GB to allocate space one time.
