

eSign and eSignPlus for Cloud Environments

System Requirements

Overview

Kinective’s eSignature platform, eSign Cloud, is used to power millions of “end-to-end” electronic transactions every month. Interfacing with virtually every business system used by financial institutions today, Kinective provides an easy-to-use eSignature experience for customers, while significantly transforming internal business processes and the way transactions flow across the institution. In addition, institutions can utilize eSignPlus to get the same front-end eSignature capabilities as eSign, plus a business rules-based workflow engine. The eSign Cloud service is fully managed by Kinective and runs on the Microsoft Azure platform as Software as a Service (SaaS). Microsoft Entra ID (Microsoft Azure Active Directory) is a prerequisite for eSign Cloud and must be purchased separately.
